

The Utility Data Center Program

CONVERGE So/v UDC is an Infrastructure as a Service (IaaS) platform, facilitating hybrid cloud computing. Powered by 6fusion®, CONVERGE So/v UDC addresses your customers' business and technical challenges inside the datacenter. It secures your position as a trusted advisor while unlocking profitable, long-term recurring revenue streams.

Key Benefits:

- Investment Optimization – helps our customers design and deploy cost-optimized internal cloud infrastructure.
- Transparent Cost Allocation – a unique metering system that provides transparent, granular tracking of consumption which is necessary for effective cost accounting.
- Improved IT Service Levels – our self-service user interface provides IT departments the tools necessary to improve users' ability to manage their own needs, increasing satisfaction across the enterprise.
- Integrated Hybrid Cloud – a “single pane of glass” platform that enables IT departments to make business-focused in-source versus outsource decisions.
- Simplicity – Pay for IT like a true utility with flexible, consumption-based billing.

Bottom Line: CONVERGE So/v UDC Monetizes the Cloud!

UDC, powered by 6fusion®, enables you to monetize the cloud by developing and deploying a consumption-based Cloud built around relevant ROI and TCO models.

Why CONVERGE So/v UDC?

- Single source provider for public and private cloud services
- Solve difficult ROI and TCO challenges for our customers
